

CALIBRATION POTS

CALIBRATION POTS FOR CALIBRATING CHEMICAL PUMPS

APPLICATIONS:

Calibration Pots provide an accurate pump calibration for higher pump flow rates. The totally enclosed construction assures maximum safety. The gauge is installed between the suction side of the chemical pump and the tank. The pump rate is checked by closing the valve between the tank and gauge and observing the level change in the gauge for one minute.

EQUIPMENT FEATURES:

- Design utilizes a tank with shielded tubular gauge for maximum protection from glass breakage
- Calibration pots have a maximum design pressure of 150 PSI
- Provide a means for accurately checking the feed rates of a chemical metering pump
- Manufactured in PVC, Carbon Steel and 316 Stainless Steel as standard materials. We can provide other materials to meet your chemical resistance requirements.
- Individually hand calibrated to assure maximum accuracy
- Customization is always an option, give us your design criteria and we will design a gauge to fit your needs and specifications

CALIBRATION POTS AVAILABLE WITH FLANGED OR THREADED CONNECTIONS
